**Roof Window Installation Instructions for Tile Roof**

Fold up soft flash from underneath the tray.

Using foam supplied create 2 water guards along either side of the flashing, 1st strip 25mm in from edge of tray and the 2nd strip 25mm closer to the window.

25mm Guard Spacing

When satisfied with location, making sure your roof window is going to fit remove tiles from the intended location.

Cut tile battens out

Position window so Soft Flash is located over bottom row of tiles. Window can be fixed into place by driving tech-screws (not provided) through flashing on the outside strip of foam tape into battens underneath.

Knock off any lugs on bottom of tiles that will prevent them from sitting flat on metal flashing tray. With an angle grinder trim tiles to within 40mm of awning. Ensure there is no fouling when the window is opened.

When screwing down the window to the batten make sure you screw to the outside of the foam gutter. 25mm spacing between foam gutters.

**Roof Window Installation Instructions for CGI Roof**

Fold up soft flash from underneath the tray.

Decide installation location by inspecting roof cavity. Try to avoid obstructions such as hanging beams, under purlins, etc.

Locate the crest of the CGI profile closest to the cut-out and wipe down with Methylated Spirits to ensure foam guards stick and hold correctly.

Apply foam tape supplied down both sides full length as shown.

Leave 70mm of the soaker tray exposed at the top. Fix window into position using roof screws making sure you screw into top of rib of the corrugation. (Must use screws with rubber seal as pictured)

Using silicon, seal the extended horizontal cuts.
